

Field Service

A legacy of precision hydraulic craftsmanship

Today's dynamic oilfield operations have little tolerance for costly downtime. Hannon Hydraulics is dedicated to keeping rig operations running at full capacity both safely and efficiently. Hannon understands these performance demands found in all drilling environments.

Hannon focuses on servicing the world's highest performance hydraulic systems and equipment. Our certified technicians are available to provide service on-site anywhere around the globe whether at port, in the shipyard, or at sea. We specialize in diagnosing problems on-site as well as bringing your equipment back to appropriate standards while on location.

As craftsmen experienced in hydraulic repair, we know that you need a team of hydraulic experts that can move quickly and offer custom solutions to your most challenging equipment problems. We are committed to provide you with the world's finest service in hydraulic cylinders, equipment and parts.

- Equipment installation
- Commissioning and decommissioning
- Cylinder rebuilding and overhauling
- Equipment rigging
- Equipment removal
- Troubleshooting
- Rig surveying
- Cylinder repair
- Training

CRAFTSMANSHIP MATTERS.

Hydraulic problems call for Hannon answers

Hannon Hydraulics has been supporting the oilfield industry since 1976. Depending on the specific needs of your platform, Hannon can repair all sizes of hydraulic issues on board such as tensioners, cylinders, pumps, motors, winches, and HPU's.

Because of the quality of our work and the service we extend to our customers, Hannon is recognized as a leader in complete hydraulic workovers and custom build solutions. It begins with innovative thinking and ends with unmatched customer support.

Our sole focus is on repairing the world's highest performance, precision-built hydraulics that our customers can count on for years of safe and efficient operation.

- Complete repair of hydraulics systems and equipment
- Custom hydraulics solutions for land and offshore operations
- Engineering services and support
- Large and midsize cylinders
- Maintenance, inspection and field services
